DEVESH KUMAR

SOFTWARE ENGINEER II | Reports to: Suma Kollipara

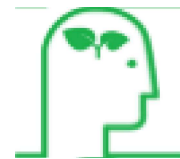

Connect Apr 2025

Reflection Period: Nov 25, 2024 - May 27, 2025

Connects provide a regular touchpoint where you and your manager can come together with a growth mindset to reflect on impact and discuss areas for improvement and future development.

Fixed Mindset leads to a desire to look smart and therefore a tendency to avoid challenges, give up easily, see failures as fruitless or worse, ignore useful negative feedback and feel threatened by the success of others.

Growth Mindset leads to a desire to learn and therefore a tendency to embrace challenges, persist in the face of setback, see failures as essential to mastery, learn from criticism and find lessons and inspiration in the success of others.

Reflect on the past

At Microsoft, we have high performance expectations of everyone. We must strive to deliver on ambitious goals, accelerate our culture and act with speed and urgency. Capture what you've accomplished and learned since your last Connect.

Summarize your impact

Core priorities

What impact did you have for each of your core priorities?

- **Copilot Assistant Implementation**
 - Proactively explored the potential of Azure Open AI's assistant features through Proof of Concepts (POCs) last quarter. Collaborated closely with Ashutosh from the PM team to strategically devise an

implementation plan for this quarter. Focused on identifying high-impact user areas for initial integration, with a target completion before April 2025 to showcase the functionality at HMI 2025.

- Recognizing the potentially massive datasets from manufacturing plants and the significant computational resources required to directly process them with the assistant, we implemented a filtering layer in between. We would filter the data based on the user question. This optimization allows us to query and extract relevant data subsets before sending them to the assistant, drastically reducing computational load and improving efficiency.
- Implemented conversation IDs to enable users to ask follow-up questions seamlessly. This enhancement allows for more natural and continuous interactions with the assistant, building upon previous exchanges.
- With the integration of assistant APIs, users can now generate charts directly. Furthermore, they can leverage the advanced reasoning capabilities of the Assistant – a significant enhancement not available in the previous V3 pipeline – to gain deeper insights from their data.
- The assistant achieved an accuracy rate exceeding 75% on the bakery dataset.
- I also wrote L0 and L2 tests specifically for the assistant.
- Successfully showcased the Copilot Assistant implementation for manufacturing to a wide MCI audience. This demonstration not only presented the working functionality but also highlighted the implementation process, marking the first onboarding of an assistant feature for any team across MCI.
- This assistant feature was extensively leveraged during Customer Engagements and proved to be a key highlight of the HMI demo. Notably, it powered the Rolls Royce HMI demonstration, showcasing its practical application.
- **Upgrading Copilot Assistant Library**
 - Upgraded to the latest Azure.AI.OpenAI.Assistant library.
 - Breaking changes in the new version required modifications to the Assistant Orchestrator.
 - New features enabled:
 - File search.
 - Attaching files at the thread level (previously only file uploads).
- **Adding File Search Capability in Assistant**
 - Added file search capability in assistant APIs. Though file search users can add user specific information to assistant. The Assistant will do similarity search with the query asked and take the most relevant file information for computation.
- **Modify base Prompt For Assistant**
 - Implemented APIs to facilitate the direct addition of user-defined instructions to the assistant's base prompt, enabling more personalized responses by providing user-centric information.
 - Developed CRUD API endpoints to allow users to manage and modify previously configured instructions.
- **Views creation**
 - Created different views for the assistant to query. Made a total of 5 different views named:
 - **Downtime View:** Retrieves data containing downtime information.
 - **Actual Production View:** Retrieves actual production data.
 - **Actual Consumption View:** Retrieves actual consumption data.
 - **Scheduled Production View:** Retrieves scheduled production data.
 - **Scheduled Consumption View:** Retrieves scheduled consumption data.
 - These views made the task of fetching data for assistant very easy as most of the complex traversal logic were taken care by the query itself. By using these views assistant could just add few filters to get the data.
 - Made use of materialized views of ADX to make the query faster.
- **Wrote Validate assistant Job**
 - Wrote assistant validate job. Though this user can test if the assistant's answer is correct or not. It automatically gives a consolidated score on how well copilot answer was.

Customer Engagement

1. Parsec

- a. Worked parsec folks to use MDS copilot on TrakSYS data.
- b. Modified existing Views and added two instruction and three examples to get all the P0 and P1 questions correctly answered by copilot

2. HMI demo

a. Rolls Royce

- i. Helped Rolls Royce team for data ingestion and took part in Customer POC of MDS
- ii. Helped then with custom Functions for assistant so adhere with their P0 questions.
- iii. Worked with PM team to make and end to end demo for HMI showcasing the assistant effectiveness on Rolls Royce data.

Bug fixes:

- Corrected failing L2 tests
- Fix failing build pipeline. upgrading library

Onboarding on Power Automate

- Familiarized myself with process mining and its repos.
- Got up to speed on React and UI development.
- Learned to write L0s for UI work.

Edge Filters

- Integrated with backend APIs for customer filtering through different edges.
- Added edge filters to each component on the process overview page.
- Integrated the code with an ECS flag to control the feature across various regions.
- Added unit tests for this functionality.

OCPM Overview Page

- Implemented the OCPM page layout.
- Enabled it behind an ECS flag.

What impact did your actions have in contributing to a more diverse and inclusive Microsoft?

Seek diverse perspectives and incorporate feedback, apply insights from a variety of sources and people

Mentor and/or support a person who may benefit

Security Core Priority

What impact did your actions have in contributing to a more secure Microsoft? You can still capture progress even before you set your Security Core Priority for the first time.

Completing and applying learnings from required Security Foundations and Trust Code (Standards of Business Conduct) trainings.

Prioritizing security in my own work and ensuring I have anticipated and implemented secure approaches to products, processes and tools in alignment with our Secure Future Initiative.

Committing to leveraging MSProtect to learn more about how I can contribute to securing Microsoft, including reporting any digital or physical security incidents via Report It Now.

Manager comments

It was a fantastic semester for Devesh as his contributions played an important role in lighting up assistant API integration capabilities for Manufacturing factory operations agent, enhancing it from a Q&A based experience to a more reasoning agent, where some of the earlier pain points with NL-KQL conversion became more predictable with view creation instead of creating complex traversal logic avoiding hallucinations. This is one of the most sought after and advertised capability from the product and at big manufacturing events like HMI. While implementing the assistant flow, Devesh's contributions to the core orchestration using Assistant were instrumental in fast-tracking our development cycle. He has established himself as a dependable engineer, delivering features with robustness. Additionally, he has effectively handled several time-critical bugs, resolving them promptly and efficiently.

Devesh was also certified and part of Threat Model v-team in MCI (cloud for industries team) and always brought that experience while working with customer engagements, building features. He contributed to overall release hygiene through product bug bash, code reviews, and supported other developers with unblocking them on need basis.

Devesh is highly accountable and committed engineer who does things with passion and perfection, and a very good team player.

Reflect on a challenge or setback

All of us must accelerate our culture by doubling down on growth mindset and challenging our fixed mindsets. Share how you demonstrated a growth mindset by taking personal **accountability for setbacks, seeking and providing feedback, and applying learnings to have greater impact.**

Consider when you could have done something differently. How will you apply what you learned to make an even greater impact?

- Assistant integration with pipeline V3. We should have prioritized integrating assistant with Pipeline V3 as we saw customers actively wanted to use assistant. If we had integrated pipeline v3, then results could have been more accurate and less hallucinations. Moving on we should try to integrate new features more with existing features for a more enhanced customer experience
- We could have more customer engagements before HMI for more hardening of the product. Moving on we should have more actual customer feedback.

Manager comments

In alignment, hopefully these learnings are taken and implemented in your next assignments.

Plan for the future

Think about opportunities for impact in the upcoming Connect period. What are your 3-5 core priorities?

Review your core priorities

Core priorities

1. EY helix engagement

Focus areas for the upcoming period to drive business impact:

- **Formalization of EY Hosting on Microsoft Fabric and Integrated Datastores:** Establish a robust and scalable infrastructure for EY's data assets and analytical workloads through the deployment and integration of datastores within the Microsoft Fabric environment for process mining.
- **Optimization of Power BI Consumption Experience via Microsoft Fabric Integration:** Seamlessly integrate the Power BI user experience with the underlying Microsoft Fabric platform to enhance data accessibility, performance, and overall user satisfaction

Success measures:

- **Successful Onboarding of EY within the Process Mining Platform:** Achieve the complete and effective onboarding of EY onto the designated process mining platform, ensuring full utilization of its analytical capabilities.
- **Quantifiable Revenue Growth Attributable to Large Client Onboarding:** Realize a measurable increase in revenue directly resulting from the successful onboarding and engagement of a significant new client.
- **Improvement in Overall User Satisfaction through Expedited Bug Resolution:** Enhance user satisfaction metrics through the implementation of efficient processes and workflows that lead to a demonstrably faster resolution of reported software defects and issues

2. OCPM workflow

Focus areas for the upcoming period to drive business impact:

- **Dedicated Development of Web-Based Process Mining UI Repository:** Prioritize the focused development and refinement of the web-based user interface repository for the process mining component.
- **Creation of OCPM Overview Page with Backend API Integration:** Develop a comprehensive overview page for OCPM, ensuring seamless integration with relevant backend APIs to provide a unified and informative user experience.
- **Preparation of Product for Private and Public Preview Stages:** Execute necessary development and testing activities to ensure the OCPM product is feature-complete and stable for both private and subsequent public preview releases.

Success measures:

- **Enhanced Customer Adoption of OCPM:** Achieve a demonstrable increase in customer adoption and utilization of the OCPM platform.
- **Accelerated Resolution of Identified Defects:** Improve the efficiency of the bug resolution process, leading to a faster turnaround time for addressing and resolving reported issues.
- **Reduction in the Occurrence of Production Defects:** Implement rigorous development and testing practices aimed at minimizing the number of bugs encountered in the production environment.

3. DRI Work

Focus areas for the upcoming period to drive business impact:

- **DRI Support for PI service**
- **Delivery of Post-General Availability (GA) Support for Web-Based Process Mining:** Provide dedicated and timely support for the web-based process mining platform following its General Availability release, addressing user inquiries and resolving any emerging issues.

Success measures:

- **Improvement in Bug Resolution Speed and Turnaround Time:** Achieve a demonstrable acceleration in the process of identifying, addressing, and resolving software defects, resulting in a reduced turnaround time for issue resolution

Diversity & Inclusion (D&I) Core Priority

To realize our mission to empower every person and organization on the planet to achieve more, each and every one of us must help create a diverse and inclusive culture where everyone can bring their full and authentic self, in alignment with our values. Consider how you will **deliver successful impact by consistently demonstrating Microsoft's cultural expectations and values**. Visit the [Diversity & Inclusion \(D&I\) Core Priority page](#) for guidance and examples of impact.

Select and commit to at least one focus area from the options below, or create one of your own.

- Seek diverse perspectives and incorporate feedback, apply insights from a variety of sources and people
- Mentor and/or support a person who may benefit

How will you define success as you activate your D&I Core Priority?

- The perspective and feedback from others would be a good measure for success.

Security Core Priority

We all have the responsibility to directly contribute to the security of Microsoft and our customers. We must all commit to prioritizing the design, build and delivery of technology, tools, data and processes that meet the highest possible standard of security. **For more information on the Security Core Priority, visit [HRweb](#).**

With this priority, I personally commit to being an active and intentional participant in creating a secure Microsoft by:

- Completing and applying learnings from required Security Foundations and Trust Code (Standards of Business Conduct) trainings.
- Prioritizing security in my own work and ensuring I have anticipated and implemented secure approaches to products, processes and tools **in alignment with our [Secure Future Initiative](#).**
- Committing to leveraging [MSProtect](#) to learn more about how I can contribute to securing Microsoft, including reporting any digital or physical security incidents via [Report It Now](#).

Manager comments

In alignment with the goals

Identify your opportunities for growth

We are all expected to embrace a growth mindset and focus on continuous learning to deliver successful impact.

What 1-2 actions will you take over the next period to learn and apply new skills and capabilities?

- **Power Automate UI Component Expertise:** Focus on in-depth knowledge regarding Power Automate's user interface components.
- **End-to-End Feature Implementation Proficiency:** Develop comprehensive skills in the complete lifecycle of feature implementation, encompassing both backend development and frontend integration.
- **Modern Frontend Technology Advancement:** Invest significant effort in learning the latest advancements in React and the Fluent UI component library.
- **React and Playwright Testing Framework Mastery:** Explore and gain practical expertise in React testing frameworks for unit testing (L0) and Playwright for end-to-end testing.
- **Process Mining Domain Knowledge and Communication:** Acquire domain-specific knowledge in Process Mining and cultivate the ability to effectively share related insights.

What support do you need to fulfill these actions? Fill in any that apply.

Ack

Conversation starters (optional)

Choose any of these optional prompts to continue great conversations with your manager. Write a brief response (1-15 words).

Of my strengths, the ones I'd like to apply more in my work are:

In my work, I feel motivated or energized by:

In my work, I lose motivation or energy from:

I know I can't do everything on my own. I'd like help with:

It can be challenging to prioritize important topics for 1:1 conversations. Plan ahead and flag any of the following topics you'd like to discuss with your manager in upcoming conversations.

Career: Discuss ways to grow my career to align with my strengths, interest & aspirations.

Recognition: Discuss my [recognition preferences](#) and highlight my contributions.

Opportunities: Increase my responsibilities, such as new core priorities, stretch assignments, promotion or becoming a people manager.

Alignment: Clarify priorities and expectations for successful impact.

Learning: Explore potential development and growth opportunities to optimize your performance.

Feedback: Get input on how I'm doing in my role and how to deliver great impact.

Flexibility: Consider how you work best and discuss your workplace preferences (i.e. site, location, hours)

Wellbeing: Discuss any dimensions of being well: mental, emotional, physical, financial.

Check out aka.ms/career for resources and guides on developing your career.
