DEVESH KUMAR

SOFTWARE ENGINEER II | Reports to: Suma Kollipara

Connect Oct 2025

Reflection Period: May 28, 2025 - Oct 21, 2025

Impact is **what** you accomplish - and **how** you do it matters just as much.

WHAT

What results have you delivered for your goals, keeping security, quality, and AI in mind?

HOW

How have your behaviors and actions led you, your team and Microsoft to excel, grow, and build trust?

Reflect on the past

What results did you deliver, and how did you do it?

Edge Filter Implementation

- **Introduced Edge Filter Panel** to empower users with precise edge-based filtering.
- **Optimized user experience** through infinite scroll for seamless navigation.
- Enabled **direct edge filter addition via widgets**, reducing clicks and improving efficiency.
- **Integrated advanced search** with backend API for faster, accurate edge selection
- Added playwright tests for the same

OCPM Overview Page Layout

- **Designed an intuitive overview page** for Object-Centric Process Mining (OCPM), enhancing user navigation and clarity.
- **Implemented ECS flag control** for safe and phased feature rollout.
- Positioned **object-centric mining as a strategic driver** for process insights.
- **Showcased at PPCC 2025** by Roman.

OCPM Widgets

Process Analysis widget

- **Developed a dynamic Process Analysis widget** for actionable process statistics.
- Delivered **full configurability**:
 - Switch **leading objects** effortlessly.
 - Customize **path views** for deeper insights.
- Enhanced usability with **infinite scroll in configuration dropdowns**.

Average Object Duration widget

- **Implemented a sleek horizontal bar chart** to visualize object type durations.
- Enabled **quick filtering by object type**, driving faster decision-making.
- Highlighted **performance bottlenecks** for process optimization.

Objects Count widget

- **Created an interactive pie chart** to display object distribution percentages.
- Added **one-click filtering from widgets**, simplifying analysis workflows.

OCPM Filter Panel

Timeframe Filter Panel

- **Built a robust timeframe configuration panel** for filtering objects by arrival time.
- Added **proximity level and object type selection**, enabling granular control.

Object Proximity Filter Panel

- **Empowered users with proximity-based filtering** for objects and neighbors.
- Delivered **infinite scroll and search integration** for smooth, scalable filtering.

OCPM Playwright Tests

- **Configured automated Playwright test resources** for end-to-end OCPM flow validation.
- Authored **comprehensive test suites** covering:
 - Overview page
 - Widgets
 - Filters
 Ensuring **quality and reliability at scale**.

Process Details Page

- **Redesigned process details page** to clearly differentiate **OCPM vs. case-centric processes**, improving user understanding.

Goal to process [POC]

1) OEA Dictionary → OCEL Conversion

- **Configured a Copilot Studio agent** to transform **Object Entity Attribute (OEA) dictionaries** into **OCEL**.
- **Enabled web search** within the agent to **discover missing entities and relationships**, ensuring completeness of the event model.
- **Refined the OCEL schema** to **avoid reliance on user data**, improving privacy, portability, and compliance.

2) OEA Dictionary & FOL Creation via SBVR

- **Designed a Copilot Studio agent** that **generates OEA dictionaries** and **First-Order Logic (FOL)** expressions directly from **SBVR (Semantics of Business Vocabulary and Rules)** statements.

3) Conversation store exploration

- Investigated approaches to utilize CDS tables as a data store for Copilot conversations.
- Researched secure and efficient strategies for storing conversation data.

Chart Configuration

- **Empowered users with full chart customization** to tailor visualizations to their needs.
- **Enabled dynamic metric selection**, allowing users to choose the data they want to display.
- Enabled users to choose between displaying edges attributes or variants
- **Added control over data points**, giving flexibility in graph granularity.
- **Introduced editable chart titles** for personalized presentation.
- Designed this feature for **future integration with persistent storage**, ensuring user preferences can be saved.

Dedicated Panels in Process Overview Page

- Created **separate panels for diverse chart types**, enhancing clarity and usability:
 - **Horizontal Bar Chart** – Ideal for comparative metrics.
 - **Vertical Bar Chart** – For structured category analysis.
 - **Line Chart** – To visualize trends over time.
 - **KPI Card** – Highlight key performance indicators at a glance.
 - **Activity Card** – Summarize process activities effectively.
- **Improved user autonomy** in data visualization.
- **Streamlined analysis workflows** with configurable charts.
- **Future-ready design** for persistent customization and scalability.

Added container name in Dataverse folder call

- In dataverse call added container name making it easier for users having multiple containers to identify the process

Playwright test:

- **Implemented automated tests** to ensure reliability and correctness of critical workflows.
- **Reduced manual testing effort** by introducing Playwright-based automation for:
 - **Trial License** validation.
 - **Scheduled Refresh** functionality.
 - **Disconnect button** behavior for Scheduled Refresh test data.

ICM and bug fixes

- **Add scrolls in selection panel**
 - Added scroll in **filter panel** so users can access buttons even on smaller screens.
- **Fix no call to Dataverse for process creation**

- Fixed a **P0 issue** during BHL loop week where users were unable to create a process.
- Identified this bug through a **failing Playwright test**.
- **Fix processInsightDataValidationReport Playwright**
 - Refreshed old reports to ensure test accuracy.
- **Fix OCPM mapping Playwright test**
 - Resolved failing Playwright test caused by recent changes in the BHL loop.
- **RCA of data disconnect issue in Iframe environment**
 - Conducted Root Cause Analysis (RCA) for the data disconnect issue within the IFrame environment.
 - Narrowed down the problem to the specific pull request that introduced the issue.
 - Followed up with the developer responsible to ensure timely resolution

Reflect on recent setbacks - what did you learn and how did you grow?

- While fixing the **P0 issue** that I found in my bhl loop, I merged my PR into the **main branch** but missed applying the fix in **Pre-Production (PProd)**.
 - **Next time:** If I encounter a **P0 bug**, I will raise a **QFE (Quick Fix Engineering)** to ensure the fix is applied across all relevant environments promptly.
- During the **Goal-to-Process POC**, there were significant gaps in understanding between **Engineering** and **PMs**, which caused delays and friction.
 - **Next time:** I will take a more **proactive approach to clarify requirements and align expectations early**, ensuring smoother collaboration and execution.

Manager comments

Devesh is highly reliable and accountable developer in team and continued his stinct last semester as well and did a fantastic job in structuring the work, delivering it with high precision, quality and velocity. The way he ramped up on learning FE development, react and fluent to the way he progressed in supporting other developers in FE design and work, unblocking them and guiding them towards completion is highly commendable. Also enriching to see Devesh playing a critical role in future work estimates for G2PC UI work with the tech expertise he has built in UI work.

The way he handled the BHL loop was also great, especially in fixing the IRPs associated and keenly validating the playwright runs and making sure the release is thoroughly validated with no issues penetrating to prod.

He has shown a lot of openness in picking up some low level tasks like test automations as well and contributed significantly for reducing the manual test efforts.

He also contributed towards the G2PC POC and exploration phase and was quite instrumental in asking the right questions seeking clarity and navigating in uncertainty wherever needed. Kudos to the growth mindset.

Plan for the future

What are your goals for the upcoming period?

Goal #1. Onboarding in RPA

- Gaining expertise through knowledge transfer and leveraging it to resolve and repair incident items in RPA workflows
- Fixing issues in already deployed monitors and developing new monitoring solutions
- Actively contributing to DRI responsibilities

Goal #2. OCPM workflow

- **Dedicated Development of Web-Based Process Mining UI Repository:** Prioritize the focused development and refinement of the web-based user interface repository for the process mining component.
- **Creation of OCPM Overview Page with Backend API Integration:** Develop a comprehensive overview page for OCPM, ensuring seamless integration with relevant backend APIs to provide a unified and informative user experience.
- **Preparation of Product for Private and Public Preview Stages:** Execute necessary development and testing activities to ensure the OCPM product is feature-complete and stable for both private and subsequent public preview releases.
- **Enhanced Customer Adoption of OCPM:** Achieve a demonstrable increase in customer adoption and utilization of the OCPM platform.
- **Accelerated Resolution of Identified Defects:** Improve the efficiency of the bug resolution process, leading to a faster turnaround time for addressing and resolving reported issues.
- **Reduction in the Occurrence of Production Defects:** Implement rigorous development and testing practices aimed at minimizing the number of bugs encountered in the production environment.

Goal #3. DRI Work

- **DRI Support for PI service**
- **Delivery of Post-General Availability (GA) Support for Web-Based Process Mining:** Provide dedicated and timely support for the web-based process mining platform following its General Availability release, addressing user inquiries and resolving any emerging issues.
- **Improvement in Bug Resolution Speed and Turnaround Time:** Achieve a demonstrable acceleration in the process of identifying, addressing, and resolving software defects, resulting in a reduced turnaround time for issue resolution

I would like to see Devesh transition well into RPA runtime space, contribute towards the stability of the product with monitor additions, IRPs, and handling CRIs on his own and building the strong muscle for making RPA custoemr engagements to be successful.

Also he needs to continue with his FE journey and contribute towards the successful GA of PI Studio and OCPM, and thereby support customer engagements by driving revenue.
