Core Priorities

Last edited on **MAY 20, 2022**

Updated

Your **opportunity for impact** represents the range of what you might deliver in support of business needs, and the expectation of how you will deliver it as part of a team. This is determined by your: 

- **Core priorities** which are generally broader than specific actions or deliverables, and longer term than the span of time between Connects.
- **Key deliverables** (or critical indicator of success) which state what outcomes (or impact) you expect to deliver in support of a core priority. These may be specific actions, outcomes, measurements, etc.

All employees have a shared core priority for diversity & inclusion, and all managers have a shared core priority for managers, as shown below (Visit HRweb (<https://microsoft.sharepoint.com/sites/hrw/pages/performanceanddevelopmenthome.aspx#>) for additional guidance on Connects and core priorities) :

Our company-wide shared core priority for diversity & inclusion: (<https://microsoft.sharepoint.com/sites/hrw/Pages/Dlcorepriority.aspx>)

To realize our mission to empower every person and organization on the planet to achieve more, each and everyone of us must help create a diverse and inclusive culture where every one can bring their full and authentic self, where all voices are heard, and where we do our best work as a result. With this priority, personally commit to be an active and intentional participant in creating a diverse and inclusive Microsoft.

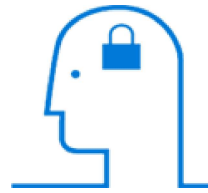

In the text box below, list your critical indicators of success for the company-wide core priority(s). Then, briefly state your additional (2-5) core priorities that represent your primary areas of focus, along with their associated critical indicators of success.

Understanding manufacturing keywords and its hidden aspects.

As part of the D&I core priority work on practicing more curiosity and demonstrating the courage to pick up new things.

In the spirit of a growth mindset, while we perform and deliver impact we also want to transform – by learning, finding lessons and inspiration in the success of others, self-reflecting and really hearing perspectives from others, embracing challenges and risks – this is how we continually improve.

Fixed Mindset leads to a desire to look smart and therefore a tendency to avoid challenges, give up easily, see failures as fruitless or worse, ignore useful negative feedback and feel threatened by the success of others.

Growth Mindset leads to a desire to learn and therefore a tendency to embrace challenges, persist in the face of setback, see failures as essential to mastery, learn from criticism and find lessons and inspiration in the success of others.

FROM: TO:

Dates apply to Looking Back - Do not apply to Core Priorities

^ Looking Back

Consider your overall impact to the business through: Your key individual accomplishments, your results that built on the work, ideas or efforts of others, your contributions to the success of others and the resulting impact of each area. Apply a growth mindset and reflect on what you could have done differently for even greater results, consider what you learned.

What contributions did you make this period and what was the resulting business impact?

Employee comments:

- **Hiding the authentication type:** I made changes in the UI Part of the authentication panel to make it switch automatically between AAD and azure key authentication.
- **LinkedServiceConnection:** I worked with Sneha to develop an end-to-end flow for linked service connection which was part of the non-azure data share flow. I wrote the APIs to create, get, delete and list linked service connections. I also designed the Linked Service Connection panel and integrated it with its APIs. On this project, I worked both on frontend as well as the backend.
- **Nonazure shared data package flow:** I worked with Sneha to develop a Nonazure shared data package panel. I wrote the code for operation logs for the NonAzure shared data package panel. I also wrote the import history panel for non-azure flow to show the history of the imported non-azure shared data package for a collaborative
- **Teams Extention:** I worked with Gyan Pragya and Nishant to explore the capabilities of teams that we could reuse in manufacturing scenarios. I particularly worked on bot Extention. With this bot extension, we could create and modify an action item for workers, and the supervisor could also upcoming tasks. We presented this feature in the knowledge-sharing session.
- **Cosmos DB initialization:** I worked with the document DB layer. I modified the init.cmd file to start the cosmos database. Also wrote the test along with it to test proper working of cosmos by reading and writing data on to it.

Manager comments:

Devesh, this review period has been challenging for the whole team as we went through couple of product/people re-orgs. Despite of the churn, you stayed positive and had supported leadership by giving sufficient time to turn back into execution rhythm.

I agree with your contributions mentioned and here is my reflection of your work and impact:

- You delivered timely key features for AICS Non-Azure data packages and collaborated well with Sneha in delivering e2e. You took feedback about linked connections strong typing and changed API contracts to align with feedback. This is a good sign of learnability/adaptability which helps you to grow as good developer. In addition, you have refactored/delivered import history panel which help Non-Azure data packages debugging/traceability.
- You delivered switch authentication (AAD vs Key) in data packages browse panel and along the way you learnt about API calls and it's relation with auth header/token generation...etc.
- As moved into Manufacturing, you have helped the team in Teams extension exploration and paired up with Gyan and others with minimal manager intervention. This Teams extension helped us in choosing right technology for Manufacturing IDS. Though, all tech choices isn't closed but this deliverable helped the LT to understand nuances of Teams extension.
- Recently, you delivered Cosmos DB access layer with a test case, and it will be our first step towards IDS codebase.

Overall, in this year you learnt Azure and microservices moving parts and I wish you all the best to continue on your learning rhythm.

What could you have done differently for even greater business impact?

Employee comments:

While working on document db layer I could have connected with gaurav's teams as they were also working on a similar field this would have saved some time and avoided repetition of work.

Manager comments:

I feel it's OK about Cosmos connectivity duplicate effort as it was a miss on manager side as well.

I would like you to do better in going bit deeper into scope of the deliverable. For example, like how service will be connecting Cosmos DB in different environments like dev vs cloud, how single partition and multiple partitions queries would be written and it's corresponding utility methods...etc.

^ Going Forward

Consider your overall potential impact to the business through: Your key individual accomplishments that will contribute to team, business or customer results, your results that will build on the work, ideas or effort of others and your contributions that will support the success of others.

What are your key deliverables and the expected business impact for the upcoming period?

Employee comments:

In the upcoming period, I shall work closely with Chaitanya and Himanshu on designing a Metrics manager. I work on implementing the metrics manager interface and its background jobs. I will also design its schema.

Manager comments:

As we are fine tuning into Manufacturing deliverables, I see you to step up to deliver core parts of IDS Data Platform like Metrics, Pipelines service.

Secondly, start looking into designs like how to model various layers in service. For example, API layer --> Service --> DB Access --> DB.

What will you do in the upcoming period to learn and grow? Consider the experiences or skills you would like to build for your growth and development. See Career Development Resources (<https://aka.ms/career>) to support you.

Employee comments:

I will be working to improve my execution speed
I would try to take more feedback while implementing any feature. Earlier I used to talk only after making some progress but taking feedback earlier speeds up the progress and gives more clarity. It will also help me to socialize more
I will also continue my learning on cloud services and different azure services.

Manager comments:

I agree with learning goals.

Adding one more "Get a deeper understanding IDS Data Platform design" and it's extensibility is planned.
