Core Priorities

Last edited on **OCT 28, 2021**

Updated

Your **opportunity for impact** represents the range of what you might deliver in support of business needs, and the expectation of how you will deliver it as part of a team. This is determined by your: 

- **Core priorities** which are generally broader than specific actions or deliverables, and longer term than the span of time between Connects.
- **Key deliverables** (or critical indicator of success) which state what outcomes (or impact) you expect to deliver in support of a core priority. These may be specific actions, outcomes, measurements, etc.

All employees have a shared core priority for diversity & inclusion, and all managers have a shared core priority for managers, as shown below (Visit HRweb (<https://microsoft.sharepoint.com/sites/hrw/pages/performanceanddevelopmenthome.aspx#>) for additional guidance on Connects and core priorities) :

Our company-wide shared core priority for diversity & inclusion: (<https://microsoft.sharepoint.com/sites/hrw/Pages/Dlcorepriority.aspx>)

To realize our mission to empower every person and organization on the planet to achieve more, each and everyone of us must help create a diverse and inclusive culture where every one can bring their full and authentic self, where all voices are heard, and where we do our best work as a result. With this priority, personally commit to be an active and intentional participant in creating a diverse and inclusive Microsoft.

In the text box below, list your critical indicators of success for the company-wide core priority(s). Then, briefly state your additional (2-5) core priorities that represent your primary areas of focus, along with their associated critical indicators of success.

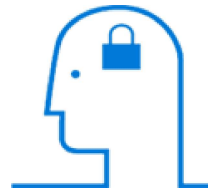

Understanding the working, codebase, and coding style of AICS. This also includes getting familiarized with react and C sharp which forms the chunk of codes in AICS.

Support and maintain the cleanup script so that tests run smoothly

As part of the D&I core priority work on practicing more curiosity and demonstrating the courage to pick up new things.

In the spirit of a growth mindset, while we perform and deliver impact we also want to transform – by learning, finding lessons and inspiration in the success of others, self-reflecting and really hearing perspectives from others, embracing challenges and risks – this is how we continually improve.

Fixed Mindset leads to a desire to look smart and therefore a tendency to avoid challenges, give up easily, see failures as fruitless or worse, ignore useful negative feedback and feel threatened by the success of others.

Growth Mindset leads to a desire to learn and therefore a tendency to embrace challenges, persist in the face of setback, see failures as essential to mastery, learn from criticism and find lessons and inspiration in the success of others.

FROM: Jul 18, 2021 TO: Oct 18, 2021

Dates apply to Looking Back - Do not apply to Core Priorities

^ Looking Back

Consider your overall impact to the business through: Your key individual accomplishments, your results that built on the work, ideas or efforts of others, your contributions to the success of others and the resulting impact of each area. Apply a growth mindset and reflect on what you could have done differently for even greater results, consider what you learned.

What contributions did you make this period and what was the resulting business impact?

Employee comments:

During this period most of my time went into understanding the business model of AICS, the code, and learning the new languages that are used in the AICS codebase. The work done to me can be summarized in the following way:

- CleanUpscript:

I wrote three Powershell scripts to timely delete the resources that are being created during testing by the developers as well as the resources created L1 testing:

1. Cleanup Merged: This was a unified PowerShell code to delete most of the AICS resources, Data share, storage, and the synapse. Earlier each of the resources had a different cleanup script and a different retention time for the resource. It also has a different retention time for tests and normal resources.
2. CleanupDerivedModel: This was a PowerShell code to delete the derived models created during Prod test as well as for ARM scoped Derived Models.

Impact:

1. Made it easier to maintain the code base as few codes. Reduced the Tasks in ALDS cleanup by 9.
2. Now important resources required by Pms for presentation will not be deleted as they can use NeverDelete tag.
3. All the Test resources will be deleted promptly. This will help in the smooth running of the Test as there is only a limited no of test resources that could be created,

- new Guid Usage: Many Import jobs were failing. Upon investigating the error on the Kusto we figured out that jobs were failing due to incorrect Import ids which were intern due to the wrong usage of Guid. So I changed the guid usage from new Guid() to

Guid.NewGuid() across the codebase. This helped in significantly reducing the number of failed jobs.

Manager comments:

Devesh, this review period has been a very good starting point for you in AICS/Microsoft. You learnt about the product very quickly and delivered couple of bug fixes in first couple of weeks itself.

Some of your contributions are:

- Activity logs fixes: you delivered good set of bug fixes in Activity logs area, including persona fixes, message fixes...etc. You were able to understand the Activity logs design very quickly.
- Cleanup script: This is one of your major contribution in this review period. You have worked Chaithanya to understand the issue deeper, came up with couple of cleanup scripts that helped in keeping our engineering system healthy. Though you faced some hiccups in the beginning w.r.t rolling out the script, eventually you were able to roll out in a safe manner without impacting dev/PMs resources. As part of this, you have shown good collaboration skills with the team.
- Guid.NewGuid investigations: With others help, you have found a very important issue in Guid.NewGuid usage which was causing scheduled imports to silently fail. You fixed the code issue, and swept through whole code base to cleanup similar usages. You have investigated ways to enforce code analysis rule to disable Guid.NewGuid usage but you couldn't find any inbuilt mechanism to do that. Overall, you did a reasonable job in navigating through this issue.
- You made an enhancement to existing L1 tests to prepare test data in Test class initialization as opposed to doing it for every test. This will act as an example pattern to follow for other tests.
- You have added an L1 test for scheduled import which will help in catching scheduling failures.

Overall, you are reliable engineer striving to contribute more. I am looking forward to work with you create impact in coming period and I wish you all the best.

What could you have done differently for even greater business impact?

Employee comments:

In the New Guid Usage we could have enabled a code analysis rule so that we could prevent new Guid() usage throughout the codebase. In addition, we are also planning to have a test for scheduled imports.

Manager comments:

- Improve on strong typing in your coding
- Write test cases along with product code

^ Going Forward

Consider your overall potential impact to the business through: Your key individual accomplishments that will contribute to team, business or customer results, your results that will build on the work, ideas or effort of others and your contributions that will support the success of others.

What are your key deliverables and the expected business impact for the upcoming period?

Employee comments:

1. Framework for running jobs in L1 tests and Improving test document creation in existing L0/L1 tests: We would be able to test the jobs also which will help us mitigate the cases where we have job failures like import fail jobs.
2. Contribute Collab data validations w.r.t SynapseDB, CSV, Excel
3. Help in delivering Co-build scenarios
4. Help in supporting collaborative features

Manager comments:

Agree with what you have mentioned. Restating the same:

- L1 tests framework that can exercise job implementations thoroughly
- Pair up with Gyan to contribute to collab validation scenarios
- Learn more about the AICS product architecture
- Help in delivering co-build scenarios

What will you do in the upcoming period to learn and grow? Consider the experiences or skills you would like to build for your growth and development. See Career Development Resources (<https://aka.ms/career>) to support you.

Employee comments:

- Improve my communication skill:

While interacting in the scrum and sometimes in one on one meetings I find that sometimes I am not able to express myself fully. To overcome this I plan to organize my thoughts and question beforehand in a word or a one-note.

- Improve the quality of my Pull Request:

I will try to make sure that my Next PRs have no indentation and spacing errors. These mistakes can be easily fixed and cause unnecessary delays when not checked. I will also try to make my code more readable by naming the variable correctly. I will also try to speed up my output.

Manager comments:

Apart from what you mentioned, I recommend the following learnings:

- Get a good understanding of in general about cloud services
- Get a good understanding of Azure and Azure eco system
