EDUCATION

B.Tech + M.Tech (Dual Degree)

IIT Bombay — Electrical Engineering
2016 – 2021
CGPA: 8.49 / 10

Minor — Computer Science

IIT Bombay
2017 – 2021

TECHNICAL SKILLS

Languages

C# Python TypeScript SQL
KQL Bicep C++

Azure Platform

Azure OpenAI Azure Data Explorer
Azure Functions Cosmos DB
Event Hub Redis AKS Synapse
Key Vault

Frameworks & Tools

.NET / dotnet 8 React Fluent UI
Docker Kafka Playwright

Practices

IaC (Bicep) Managed Identity
VNet / Private Endpoints RAG
Threat Modeling

ACHIEVEMENTS

- Top 1% among 2 lakh aspirants in JEE Advanced 2016
- 99.1 percentile in JEE Mains 2016
- Qualified National Talent Search Exam (NTSE)

EXPERIENCE

Microsoft India

Hyderabad, India

Software Engineer II | Jul 2021 – Present

Manufacturing Data Platform & Knowledge Graph

Jul 2021 – Oct 2023

- Redesigned IoT data ingestion pipeline by eliminating Azure Digital Twin — **cut node ingestion time 39% (18 → 11 min)** and **relationship ingestion 54% (39 → 18 min)** for 330k nodes / 450k relationships.
- Built multi-hop graph query APIs and time-series historization on **Azure Data Explorer**, enabling root-cause analysis across manufacturing knowledge graph with configurable hops and path filters.
- Secured entire infrastructure via **virtual networks, private endpoints, and managed identity** across all Azure services (Cosmos DB, ADX, Redis, Storage) — eliminated all List Keys API usage; achieved S360 compliance.
- Authored Bicep IaC templates for **full one-click deployment**; containerised services with Docker and deployed on AKS; implemented Bring-Your-Own-Store to reduce customer cloud costs.
- Eliminated **1,152 code warnings**, enforced 70% LO coverage gate in CI pipeline, and standardised exception handling — reducing production null errors significantly.

AI Copilot & Manufacturing Agent

Nov 2023 – May 2025

- Integrated Copilot V3 pipeline with RAG-based instruction/example retrieval and automatic KQL-to-cipher-text conversion; added typecast injection on generated queries — **raised Copilot accuracy from 40% to 75%+**.
- First team across MCI** to ship Azure OpenAI Assistant API in production; built filtering layer, conversation IDs, and file-search capability — showcased at **HMI 2025 (Rolls Royce demo)**; assistant accuracy exceeded 75% on bakery dataset.
- Vectorised entity/schema ingestion in real-time via a dedicated Event Hub + Redis pipeline backed by Azure OpenAI through Managed Identity — **decoupled from main ingestion flow** to eliminate throughput impact.
- Supported Parsec and Rolls Royce customer POCs end-to-end; **certified MCI Threat Model reviewer** — conducted architecture review for Industry AI team.

Power Automate Process Mining

May 2025 – Present

- Delivered OCPM (Object-Centric Process Mining) overview page, edge filter panel with infinite scroll, and 5 chart widgets (bar, pie, line, KPI, activity) in **React / Fluent UI / TypeScript**; feature showcased at PPCC 2025.
- Authored end-to-end **Playwright test suites** covering OCPM overview, widgets, and filters — significantly reducing manual QA effort.

Chicago Mercantile Exchange (CME) Group

Bangalore, India

Intern — Quant Research Team | May 2019 – Jul 2019

- Applied **Principal Component Analysis** to identify largest interest rate curve movements, stress-testing risk models against extreme market scenarios.
- Built an R tool to compute margin offsets at the currency level across all accounts.
