Software Engineer II — Microsoft India | Power Automate

March 29, 2026

Hiring Team

Electronic Arts

Dear Hiring Team,

I am applying for the Software Engineer 2 position at Electronic Arts. EA's live game services run on real-time data, high-throughput event pipelines, and analytics that need to perform at player scale — exactly the class of systems I have spent four years building and optimizing at Microsoft.

At Microsoft, I redesigned an IoT ingestion pipeline by eliminating a costly intermediary service (Azure Digital Twin), rearchitecting direct ingestion into Azure Data Explorer and restructuring batch processing — **cutting node ingestion time by 39% (18→11 min for 330k nodes) and relationship ingestion by 54% (39→18 min for 450k relationships)**. To feed AI capabilities into this same pipeline, I built a fully decoupled vectorization layer using Event Hub and Redis that runs concurrently with ingestion without throughput degradation, and integrated Azure OpenAI via Managed Identity — making my team **the first across Microsoft's Cloud for Industries division to ship the Azure OpenAI Assistant API in production**, demonstrated live at HMI 2025 with Rolls Royce at **over 75% query accuracy**. Most recently, on Power Automate, I built five fully configurable analytics widgets (bar, pie, line, KPI, activity) in **React, TypeScript, and Fluent UI**, each supporting **20–30 distinct metric configurations** without code changes, backed by comprehensive Playwright end-to-end test suites.

I am eager to bring this combination of scalable backend systems, real-time data pipelines, and production-quality frontend engineering to EA's player platform and live services work. Thank you for your consideration — I would welcome the opportunity to discuss how my experience maps to your team's needs.

Sincerely,

Devesh Kumar
