Software Engineer II — Microsoft India | Power Automate

March 29, 2026

Hiring Team

LinkedIn

Dear Hiring Team,

I am applying for the Senior Machine Learning Engineer role on LinkedIn's agentic AI team. LinkedIn's mission — creating economic opportunity for every professional — resonates directly with the work I have spent four years doing at Microsoft: building AI systems that connect domain knowledge to people who need it, turning raw data into decisions at manufacturing scale.

At Microsoft, I led the end-to-end engineering of an LLM-powered conversational agent for industrial manufacturing — the **first Azure OpenAI Assistant API deployment across Microsoft's Cloud for Industry (MCI) division**. I designed the full agentic stack: a RAG pipeline with real-time entity and schema vectorization via a dedicated Event Hub + Redis channel (fully decoupled from ingestion to protect throughput), automatic KQL-to-Cypher conversion, column typecast injection on generated queries, and a filtering layer that narrows the manufacturing knowledge graph before each assistant call to reduce hallucinations. These changes lifted **end-to-end query accuracy from 40% to 75%+** on production customer datasets, and the system was showcased live at HMI 2025 during a Rolls Royce customer engagement. Beyond the core pipeline, I built and maintained the evaluation harness — a validate-assistant job that scores Copilot responses automatically — and ran responsible AI red-teaming to surface jailbreak vulnerabilities before release. More recently, I designed Copilot Studio agents that convert SBVR business rules into first-order logic and OCEL event models, exploring the frontier of structured reasoning with LLMs.

I would welcome the opportunity to bring this production agentic AI experience to LinkedIn's next generation of conversational systems. Thank you for your time and consideration — I look forward to the possibility of a conversation.

Sincerely,

Devesh Kumar
