Software Engineer II — Microsoft India | Power Automate

March 29, 2026

Hiring Team

Myntra

Dear Hiring Team,

I am writing to apply for the Technical Lead — Machine Learning Platform role at Myntra. Building the foundational infrastructure that enables ML at scale — real-time inference, feature pipelines, model observability — is exactly the problem space I have been working in at Microsoft, and the scale and ambition of Myntra's personalization platform makes this a compelling next step.

At Microsoft, I designed and owned the end-to-end vectorization pipeline for a manufacturing AI platform: entity and schema metadata were embedded in real time via a dedicated **Event Hub + Redis pipeline** using Azure OpenAI, fully decoupled from the main ingestion flow to eliminate throughput interference. I was the **first engineer across Microsoft Cloud for Industries** to ship the Azure OpenAI Assistant API into production — building the data-filtering layer, conversation threading, RAG-based retrieval, and file-search capability, taking end-to-end query accuracy from **40% to over 75%** on customer datasets. On the infrastructure side, I have deployed and operated services on **Kubernetes (AKS)**, authored Bicep IaC for one-click provisioning, and secured entire platform stacks behind virtual networks with private endpoints and managed identity.

I am drawn to Myntra's ML Platform because it sits at the intersection of real-time inference, feature engineering, and developer-facing platform design — the same dimensions I have been building toward. Thank you for your consideration; I would welcome the opportunity to discuss how my experience maps to what you are building.

Sincerely,

Devesh Kumar
